AGRICULTURE.

F This Department is devoted especially to the interests of Agriculture. Contributions from Farmers are respectfully solicited.

About Sick Animals. Nearly all sick animals become so by improper feeding in the first place. Nine cases out of ten the digestion is wrong. Charcoal is the most efficent and rapid corrective. It will cure in a majority of cases if properly administered. An example of its use:—The third man came in with the intelligence that one of the finest cows was very sick, and a kind neighbor proposed the usual drugs and poisons. The owner being ill and unable to examine the cow, concluded that the trouble came from overcating, and ordered a teacupful of pulverized charcoal given in water. It was mixed, placed in a junk bottle, the head held upward, and the water and charcoal poured downward. In five minutes improvement was visible, and in a few hours the animal was in the pasture quietly eating grass. Another instant of equal success occured with a young heifer which had become badly bloated by eating green apples after a hard wind. The bloat was so severe that the sides were almost as hard as a barrel. The old remedy, saleratus, was tried for correcting the acidity. But the attempt to put it down always caused coughing, and it did little good. Half a teacupful of fresh powdered charcoal was given. In six hours all appearance of the bloat had

The Best Field Beans.

gone and the heifer was well.

The American Rural Home says that in Western New York the medium and marrow are most planted and the white kindney and early pea to a limited extent. The medium is considered the most reliable, as, from its early ripening it is less affected by the vicissitudes of the seasons. It sells for less, however, than the other varieties named. The marrow is quite a to say nothing of probable headpopular variety, and on a strong soil is very productive. It is quoted thirty five cents a bushel higher than medium in the Rochester market, now, and the same as kidmarket, now, and the same as kidney. The white kidney has large stalks, requires a longer season to be matured in, and is more liable to be spoiled in ripening. When everything, however, is favorable it will produce large crops. It will, of course, make a difference in what way the beans are planted as to the quantity of seed required, but farmers generally used about a bushel of the marrows and mediums to the acre, rather more of the kidneys, and about half as much of the

READ THE FOLLOWING CERTIFICATES:

From J. J. Taylor.

From Hon. Mills L. Eure, Judge of the First District.

Toisnot, N. C., Oct. 25, 1874. Gents—I used the three tons of Star Phosphate purchashed from you under cotton, and beg leave to say that it has acted better on my land than any Fertilizer I have used in fifbeg leave to say that it has acted better on my land than any leave to induce my neighteen years. I am entirely satisfied with its results, and shall endeavor to induce my neighteen years. Very truly.

Very truly.

J. J. TAYLOR.

Gatesville, N. C., Jan. 22, 1874.

Gents -I used the Star Phosphate last year under cotton, applied as the manufacturers direct. The result was in the highest degree satisfactory. I also used a small quantity in corn, applied in July, when hilled, sowing the land at the same time in peas. In my opinion the yield both of corn and peas was nearly doubled by the Fertilizer. I think the Star Phosphate possesses great merit, and I shall continue to use it so long as its application gives such gratifying proofs of its intrinsic worth. Very truly yours,

Beaufort County, N. C., Dec. 29th, 1873, Gentlemen-I take pleasure in recommending the Star Phosphate bought of you last eason to all farmers, as a No. 1 Fertilizer. I consider it equal to any I ever used Yours truly,

Thousands similar could be given if necessary. These excellent Fertilizers will be sold on very accommodating terms.

GUANO.

ORCHILLA GUANO.

A TRUE BIRD GUANO,

Soluble Ammoniated South Sea Guano.

Analysis made by order of Prof. W. C. KERR, State Geologist of North Carolina, by Dr. F. A. GENTH, University of Penna, at Philadelphia, I have analyzed as follows :- 1 sample of " Soluble Ammoniated South Sea Guano, pre-

For 425 lbs. good Lint Cotton, on or before 1st December, will give pared for Cotton by B. M. RHODES & CO., 82 South Street, Baltimore, 182 lbs.," which Soluble Phosphoric Acid, 4.32 " " equivalent to 943 per cent of Bone Phosphate of Lime Precipitated " 4.32 " " 15.63 " " " "

Nitrogen, equivalent to 2.98 - 8.20 " " Alkaline Salts, 2—Sample of "Orchilla Guano, A. A., B. M. RHODBS & CO., Importers' Agents, 82
South Street, Baltimore, 167 lbs. Curacao," which I found to contain—
Phosphoric Acid, - 26.86 per cent., equivalent to 58.64 per ct. of Bone Phosphate of Lime

Both samples were certified to have been taken, sec.ed and . . , by Thos. Harris Hodges Notary Public, and were in perfect condition. The Orchilla, which seems to be an organic deposit, can be recommended to the farmer for use in its crude state, and after a careful and complete analysis, as well as a thorough examination of the mechanical condition, as well as from the testimony of several who have used it in its crude state, and have expressed to me their entire satisfaction. I feel perfectly justified in recommending the Orchilla. Prof. Anal. and App'ld Chemistry, Maryland Institute

The Orchilla Guano, which is truly an organic deposit, deserves well the attention of the farmer, not only on account of the high grade of its Phosphates of Lime and Alkaline Salts, but more particulary for the phisical condition and texture in which Guano is This material decidedly recommends itself to the attention of farmers by its large proportion of Phosphoric Acid, being in a form to be much more easily taken up by growing plants than that of the harder and more compact Mineral Phosphates. Farmers can then selves very easily add Peruvian Guano, Cotton Seed, Mill Refuse or other material affording Nitrogen when it is desired to combine the effort of Ammoniacal with that of Phosphatic Manure.

I am, gentlemen, respectfully yours,

J. W. MALLET.

RALEIGH, N. C., January 29, 1875.

From the Analysis of Dr. Genth there is no doubt of the high per centage of Phosphate of Lime in this Guano, and I enderse the recommendations of Prof. Mallett upon the above testimony of himself and Prof. Liebto & Tonny as to its physical condition that it offers a desirable source of Phosporic Acid to Cotton Farmers and others who have the means of furnishing the Nitrogenized matter at home.
